Subject: Release of New Product

Cotton-Layered Polishing Point

We are pleased to announce the release of our new product, the **Cotton-Layered Polishing Point**, and the product will be available starting Wednesday, **October 1, 2025**.

This new product features a shank-mounted buff made by layering soft and flexible cotton cloth, offering excellent compatibility with polishing compounds and delivering a smooth, natural gloss finish. Its user-friendly design makes it suitable for a wide range of materials and shapes.

To accommodate different finishing needs, two types are available: the Soft Type (Green), which provides moderate flexibility for a refined finish, and the Hard Type (Yellow), which offers firmer resilience for a more defined polishing effect. Each type is offered in two sizes to suit various applications.

— Cotton-Layered Polishing Point —

■ Product Overview

A New Polishing Tool Option! Introducing the Cotton-Layered Polishing Point.

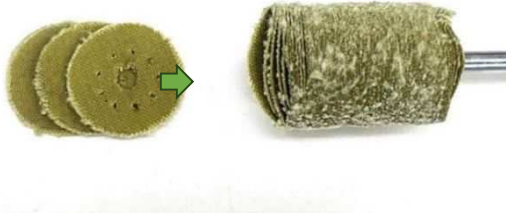

The layered cotton structure allows flexible polishing of complex surfaces such as uneven or curved areas that were previously difficult to finish.

By adopting a mounted-shank type instead of the typical wheel-type cotton buff, this tool offers excellent workability and maneuverability.

Ideal for polishing and finishing a wide range of materials—including metals, non-ferrous metals, resins, plastics, and wood.

■ Product Characteristics

- **Excellent Compound Retention for Consistent Polishing Performance**
The cotton fibers absorb and retain polishing compound effectively, delivering a smooth, even gloss finish without uneven marks.
- **Low Heat Generation and Workpieces friendly**
Ideal for heat-sensitive materials such as plastics and non-ferrous metals. Offers better heat dissipation compared to wool felt.
- **High durability for extended use**
More durable than felt buffs, this tool offers long-lasting performance and helps reduce the frequency of replacement.

Multi-layered cotton cloth ensures high conformity and flexibility—fits perfectly on uneven and curved surfaces.

A wide contact surface with up to 25 mm thickness ensures stable finishing, while the extended tool length offers steady contact and improved work efficiency.

■ Product Lineup (TL 50 mm / Shank ϕ 3.0 / Max. Allowable Rotation Speed 10,000 r.p.m.)

Product CD	Product Name	Size (Dia. x Thickness)	Package Quantity
GA4701	Cotton-Layered Polishing Point Soft (Green)	ϕ 15 × T15	3 Pieces in a Pack
GA4702	Cotton-Layered Polishing Point Soft (Green)	ϕ 15 × T25	3 Pieces in a Pack
GA4711	Cotton-Layered Polishing Point Hard (Yellow)	ϕ 15 × T15	3 Pieces in a Pack
GA4712	Cotton-Layered Polishing Point Hard (Yellow)	ϕ 15 × T25	3 Pieces in a Pack

■ Features by Hardness

• Soft (Green)

A versatile type that combines gentle firmness with softness, allowing it to conform naturally to the workpiece. Ideal for a wide range of applications.

• Hard (Yellow)

A slightly firmer, more rigid type. Ideal for processes that require higher rigidity, delivering excellent polishing power.

■ Recommended for the Following Users:

- Those who find wheel buffs too large or feel that felt has a short lifespan
- Those who want to efficiently polish workpieces with many uneven surfaces or curves
- Those seeking stable gloss and quality and those aiming for a smooth, even polish (Delivers excellent results in removing fine scratches and enhancing shine when used with compounds)
